

# AUSTRALIAN BUREAU OF STATISTICS CANBERRA

NOUIRIES

If you want to know more about these statistics ring Mr Joe Christensen on Canberra 526655 or our State office or write to Information Services, Australian Bureau of Statistics, P.O. Box 10, Belconnen, A.C.T. 2616.

### EMPLOYMENT AND UNEMPLOYMENT, FEBRUARY 1977

#### 1. EMPLOYED WAGE AND SALARY EARNERS

The figures in this section generally relate only to civilian wage and salary earners, not the total labour force: they therefore exclude employers, self-employed persons, unpaid helpers and the unemployed. Also excluded, because of the inadequacy of current data, are wage and salary earners in agriculture and private households employing staff. For the sake of brevity, wage and salary earners are referred to in the tables as "employees". Defence forces are included in Table 2.

- The estimates in Tables 1 to 10, except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population census of June 1971 and other sources. (See paragraph 8.) Month-to-month changes shown by current data (see paragraphs 9 to 11) are linked to the benchmark data to derive the monthly estimates.
- Although the series measure reasonably well the short-term trends in employment in the defined field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and current data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods.

#### Revision of private/government series

4. Estimates of private and government employment in this bulletin for the period January 1976 to February 1977 are on a revised basis, which has been designed to achieve uniformity of classification in ABS statistical collections. Estimates for earlier periods back to June 1971 will be published as soon as possible. The effect of this revision on employment estimates at January 1977 is that government employment estimates are about 150,000 higher and private employment estimates about 150,000 lower than they would have been had the previous classification been continued. The approximate increase in Australian Government employment is 1,500 and in State government employment 148,500.

- 5. The principal changes affecting the private/government dissection of employment estimates are as follows:
  - (a) Hospitals. Non-departmental "public" or "board" hospitals (other than those run by religious or charitable organisations) are now classified to State government. This change has been made because the degree of State government financing and control of such institutions was found to be sufficient to warrant their inclusion in the State government estimates. The effect of this decision is to add approximately 142,000 persons to State government employment estimates at January 1977.
  - (b) Marketing Authorities. All marketing authorities or boards (other than those which are purely growers' or producers' co-operatives) are now included in the government sector, as functions which exercise they fundamentally those of government. Previously a limited number of such bodies were included in the government employment estimates. The effect of the inclusion of all marketing authorities is to add approximately 7,000 persons to the government employment estimates at January 1977.

#### Concepts and definitions

6. The concepts and definitions applicable to these estimates are those adopted at the 1971 population census, which conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians (Geneva, 1954). At the census the following questions were asked in respect of all persons fifteen years of age and over:

"Did this person have a full or part-time job, or business or farm of any kind last week (even if this person was temporarily absent from a job because of sickness, holidays, industrial dispute, etc.)?" "Did this person do any work at all last week for payment or profit (even if this person was working only part-time or helping without pay in a family business)?"

Provided they had not been temporarily laid off by their employer without pay for the whole of the week, persons who answered "yes" to either of these questions were classified as employed. Persons in this category were classified as wage or salary earners if on their census schedule they were stated to be "a wage or salary earner" in the job they held in the previous week.

#### Government employment

7. Government employees comprise not only administrative employees but also all other employees of government bodies (Australian, State, local and semi-government) on services such as railways, road transport, banks, postal and telecommunications, air transport, education (including universities, colleges of advanced education, etc.), radio, television, police, public works, factories, marketing authorities, public hospitals (other than those run by charitable or religious organisations) and departmental hospitals and institutions.

#### Adoption of new benchmarks

- 8. As results from each successive population census become available it is customary to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census. Benchmarks for June 1971 were established by analysing data from the 1971 population census and other relevant sources such as special returns from government bodies and the Bureau's economic censuses and surveys. It should be noted that figures in this bulletin are subject to further revision as the results of later censuses and surveys become available.
- 9. The data needed to derive the estimates for periods subsequent to the benchmark date (June 1971) are obtained from three main sources, namely, (a) current payroll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. At June 1971 recorded employment obtained from the foregoing sources accounted for about 90 per cent of the employees in the industries covered, as determined by the benchmarks.
- 10. Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the

rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

11. In all States and Territories except Queensland payroll tax returns are currently lodged by all employers paying more than \$923 a week in wages. For Queensland the figure is \$1,200. Certain Australian Government bodies, religious and benevolent institutions, public hospitals and other similar organisations are specifically exempted under the Australian and State Payroll Tax Acts. The exemption level in the States was revised from \$400 to \$800 a week from January 1976, while the level in the Territories remained at \$400 a week until January 1977, when the current levels were adopted.

#### Industry

12. The industry classification used in this bulletin is the Australian Standard Industrial Classification (ASIC), described in the Bureau publication Australian Standard Industrial Classification (Preliminary Edition), 1969, Volume 1. This industry classification is not directly comparable with those adopted for population censuses before 1971 and used in the estimates for earlier periods.

#### Seasonal adjustment

13. Seasonally adjusted estimates for the industries Construction; Transport and storage; and Finance, insurance, real estate and business services are published for the first time in this issue. (See Table 1.) The other series contained in Table 1 have been revised following the annual re-analysis of data. For an explanation of the methods used see Seasonally Adjusted Indicators, 1977 (Reference No. 1.10) to be issued shortly.

#### Estimates for earlier periods

- 14. For the period June 1971 to June 1975 detailed industry figures for each State and Australia and the government employment series were published in a special bulletin *Employed Wage and Salary Earners, June 1971 to June 1975* (Reference No. 6.23).
- 15. It is expected that in due course a revised series will be published for the period June 1966 to May 1971, classified according to ASIC. However, it may not be possible to provide as much industry detail as for June 1971 and subsequent periods. ASIC estimates cannot be derived for periods prior to June 1966.
- 16. April 1973 included an unusual holiday period because Anzac Day fell two days after Easter Monday. This feature is thought to have had a depressing effect on the expansion of employment in the last pay-period of April and, by postponement, to have reinforced

expansion in May. Such an effect remains in the seasonally adjusted, as well as the original figures.

#### 2. UNEMPLOYED PERSONS

The tables in this section contain (a) estimates of the total number of persons unemployed, derived from the quarterly population survey, (b) the numbers registered with the Commonwealth Employment Service as unemployed, and (c) the number in receipt of unemployment benefit.

# Total Unemployed Persons : Population Survey Estimates

- The quarterly population survey is carried out on a sample basis throughout Australia in February, May, August and November each year. Interviews are conducted during a period of four weeks in the State capital cities and two weeks in other areas. Particulars of the number of persons employed or unemployed, and of the total labour force, are published each quarter in a bulletin *The Labour Force* (Reference No. 6.20).
- 3. For purposes of the survey, unemployed persons are defined as all civilians aged 15 years and over who either:
  - (a) during the survey week did not work and did not have a job, but could have taken one had it been available, and had been looking for full-time or part-time work in the four weeks up to and including the survey week (including persons who would have been prevented from taking a job in the survey week by their own temporary illness or injury, or by their having made arrangements to start after the survey week in a job in which they would have preferred to start in the survey week) or
  - (b) were waiting to be called back to a job from which they had been temporarily stood down without pay for four weeks or less (including the whole of the survey week).
- 4. Unemployed persons therefore comprise those looking for full-time work, those looking for part-time work and those temporarily laid off from either full-time or part-time jobs. This definition of unemployed persons conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, Geneva, 1954.
- 5. Since the estimates are based on information obtained from occupants of a sample of dwellings, they may differ from the figures that would have been produced if the information has been obtained from occupants of all dwellings. There are about two chances in three that the differences would be less than 3,800 for total unemployed males, less than 3,700 for total unemployed females and less than 5,100 for total unemployed persons, and about nineteen chances in

twenty that they would be less than twice than these figures. Further details about the survey and the reliability of estimates will be found in the quarterly bulletin *The Labour Force* (Reference No. 6.20).

- 6. The sample estimates will differ from the number of persons registered with the Commonwealth Employment Service (see Table 12) as not employed, awaiting placement in full-time employment, for a number of reasons, including the following:
  - (a) the survey estimates include persons looking for part-time work as well as those looking for full-time work,
  - (b) they include some unemployed persons (particularly females) who do not register with the Commonwealth Employment Service.
  - (c) they exclude persons who did any work at all during the survey week, even though they may subsequently have become unemployed and registered with the Commonwealth Employment Service, or have done so little work as not to lose eligibility for unemployment benefit,
  - (d) they exclude any persons registered as unemployed who find jobs but do not notify the Commonwealth Employment Service at once that they have done so,
  - (e) they represent averages over a period (see paragraph 2), whereas the numbers registered refer to a particular day, and
  - (f) they are subject to sampling variability (see paragraph 5).

## Seasonally Adjusted Series : Population Survey Estimates

- 7. Because of problems in seasonally adjusting the numbers of unemployed persons the procedures used were revised in 1976. Estimates based on the revised method were included for the first time in the July 1976 issue of this publication. Because there is insufficient length of series available to enable a complete assessment of the reliability of the new method to be made, it would be claiming too much to suggest that these problems have now been wholly overcome, but the revised estimates are at least a considerable improvement over those published previously. A brief explanation of the problems and the adjustment method now used is given below.
- 8. The method used (the US Bureau of the Census

X.11Q) assumes that the amplitude of seasonal change is proportional to the level of the series. Until 1974 this assumption worked very satisfactorily, but following the rapid rise in the level of unemployment in 1974 the proportional relationship appears to have changed very substantially, and the X-11Q method was unable to adapt sufficiently.

9. By considering the series in two parts, an estimate of the effect of the change in the proportional relationship has now been made. By means of prior adjustment factors derived from this estimate and applied to the data, the X-11Q program moving averages are now able to accommodate the 1974 change. The resulting seasonal factors reflect one proportional relationship up to 1974 and the other relationship since then.

10. The shape of the seasonal variation since 1974 may have changed as well as the relationship between

amplitude and level. (For example, the rise in the original series in August 1976 could be due, at least in part, to a new seasonal pattern.) If it has, the change will have to be handled by the adaptive capacity of the program itself.

11. As from the June 1976 issue of this publication the unemployment estimates derived from the population survey have been based on a revised definition. See the May 1976 issue of *The Labour Force* (Reference No. 6.20), pages 3 and 4, paragraphs 9 to 14 for details. Estimates of unemployment on the revised basis have a different seasonal pattern from those on the old basis. Because only five quarterly figures on the revised basis were available at the time the seasonal adjustment factors were calculated it has been necessary to make special estimates for the seasonally adjusted series, based on experience of the movements in the series on the old basis.

<sup>(</sup>a) Aged 15 years and over. For definition, see page 14, paragraph 3. See also page 14, paragraph 5 regarding the reliability of the estimates. Includes persons looking for part-time work. (c) The number of unemployed in each group as a percentage of the labour force in the same apply. (d) See paragraphs 7 to 11 above. (e) The sample size was reduced for the November 1975 survey. Consequently the standard errors estimates from that survey are larger than usual. For details see the November 1975 issue of The Labour Force (Reference No. 6.20). (f) Includes persons which is paragraph 5 regarding the reliability of the estimates.

<sup>(</sup>a) Comprises all persons who were still registered with the Commonwealth Employment Service (C.E.S.) at the Friday nearest the end of the month and who claimed when registering that they were not employed, and who were seeking full-time employment, i.e. 35 hours or more per week. They include persons referred to employers but whose employment was still unconfirmed, and persons who had recently obtained employment without notifying the C.E.S. All recipients of unemployment benefit are included. (See Table 13.) (b) Includes the Australian Capital Territory.

				<del></del>							

<sup>(</sup>a) Number on benefit at Saturday nearest the end of the month until February 1976. The introduction of fortnightly payments in March 1976 has altered the basis of collection of numbers on benefit to four or six week accounting periods. Figures now show numbers on benefit at the dates indicated (b) State and Territory classification is based on location of office from which payment of benefit is made.

<sup>(</sup>a) Vacancies notified to the CES, which were still unfilled at the Friday nearest the end of the month and which employers claimed could be filled if labour were supplied immediately or within the following month. Vacancies for full-time, part-time, permanent, temporary and seasonal positions are included. (b) Includes the Australian Capital Territory. (c) The methods used in seasonally adjusting these statistics will be explained in Seasonally Adjusted Indicators 1977 (Reference No. 1.10) to be issued shortly. (d) Juniors comprise all persons under 21 years of age, including school leavers.

NOTE. Sample surveys have been conducted by the Australian Bureau of Statistics in March each year since 1974 to obtain information on the level and composition of job vacancies. For a number of reasons the estimates obtained from these surveys differed substantially from the numbers of vacancies registered with the CES at those dates. For example, the survey estimate of total vacancies at March 1976 was 50,800, while the CES figure was 22,976. Results of the surveys and reasons why the survey estimates differ from CES statistics were published in Job Vacancies, March 1976 (Reference No. 6.49).
